

Amendments to the Specification:

A number of amendments have been made to the specification, primarily consisting of insertion of text that was present in the original drawings from the parent application. Namely, U.S. patent application serial number 10/562,964 (USPN 2006-0190039) included numerous textual labels and explanation in the drawings. At the time of filing the present application, an updated set of drawings was included that deleted this original text. However, Applicants wish to include the text from the original drawings, and thus have added back into the specification the text from the drawings.

Care has been taken to include no more than what was apparent from the original drawings. As an example of one of the text insertions, please see the new description of Fig. 2, in the Brief Description section. This derives from the text in the drawings as shown below:

Certain element numbers that were previously missing have also been added for clarity.

Because of the number of amendments, a substitute specification (clean version) under 37 C.F.R. §1.125 is attached incorporating the amendments, along with a Marked-Up copy showing the amendments using cross-outs and interlineations as required.

No new matter has been added.
